HIPCHAT AND ONELOGIN PUT IDENTITY FIRST

Atlassian
HipChat

OneLogin for HipChat enables firms to easily connect their internal directories to HipChat and enjoy single sign-on at the office.

INSTANT ON

OneLogin is entirely cloud based and allows you to get up and running in minutes. No software to install, no appliances, no firewall changes.

USER PROVISIONING

OneLogin's flexible roles allow you to efficiently manage users at a large scale. A user can have multiple roles, which in turn can contain apps. OneLogin automatically detects when to assign or remove an app from a user. Any change to roles or memberships automatically affects provisioning, which saves time.
ACTIVE DIRECTORY AND LDAP INTEGRATION

OneLogin's Active Directory Connector can be installed in minutes with no server restarts or firewall changes required. Visually select one or more organizational units (OU) to import users from Active Directory and you're all set. OneLogin synchronizes users in real time, which provides IT with an effective user kill switch for when users leave the organization.

PASSWORD VAULTING

OneLogin's market-leading password vaulting provides a secure way to access those applications that don't support a password-free single sign-on protocol like SAML. OneLogin stores the passwords securely server-side and injects them into an application's login page during sign-on.

SECURITY & AVAILABILITY

OneLogin supports complex directory infrastructures for some of the most demanding public companies in the world. Rest easy with redundant data centers, redundant DNS, DDoS protection, quarterly security reviews by iSEC Partners, and 24/7 monitoring. 99.99% Uptime Guarantee.
