Integrated Identity Management and Governance for Enhanced Security and Compliance

OneLogin and SailPoint provide a powerful integrated solution to help enterprises improve security and meet identity security and compliance needs across their hybrid cloud and on-prem IT environments.

OneLogin's Trusted Experience Platform secures access for all your users across cloud and on-prem applications with single sign-on, adaptive multi-factor authentication, automated identity lifecycle management, advanced directory integration, and access reporting.

SailPoint's Cloud Access Governance and Intelligence Platform uniquely provides the most comprehensive identity platform applying rich machine learning, autonomous risk detection and mitigation, smart process orchestration, and low/no-code extensibility to seamlessly empower and dynamically protect your cloud enterprise.

JOINT SOLUTION BENEFITS

Enhance Security and Compliance Across Cloud and On-Prem Apps

Centralize identity and governance policies across all your users, apps, and devices with robust compliance and access controls.

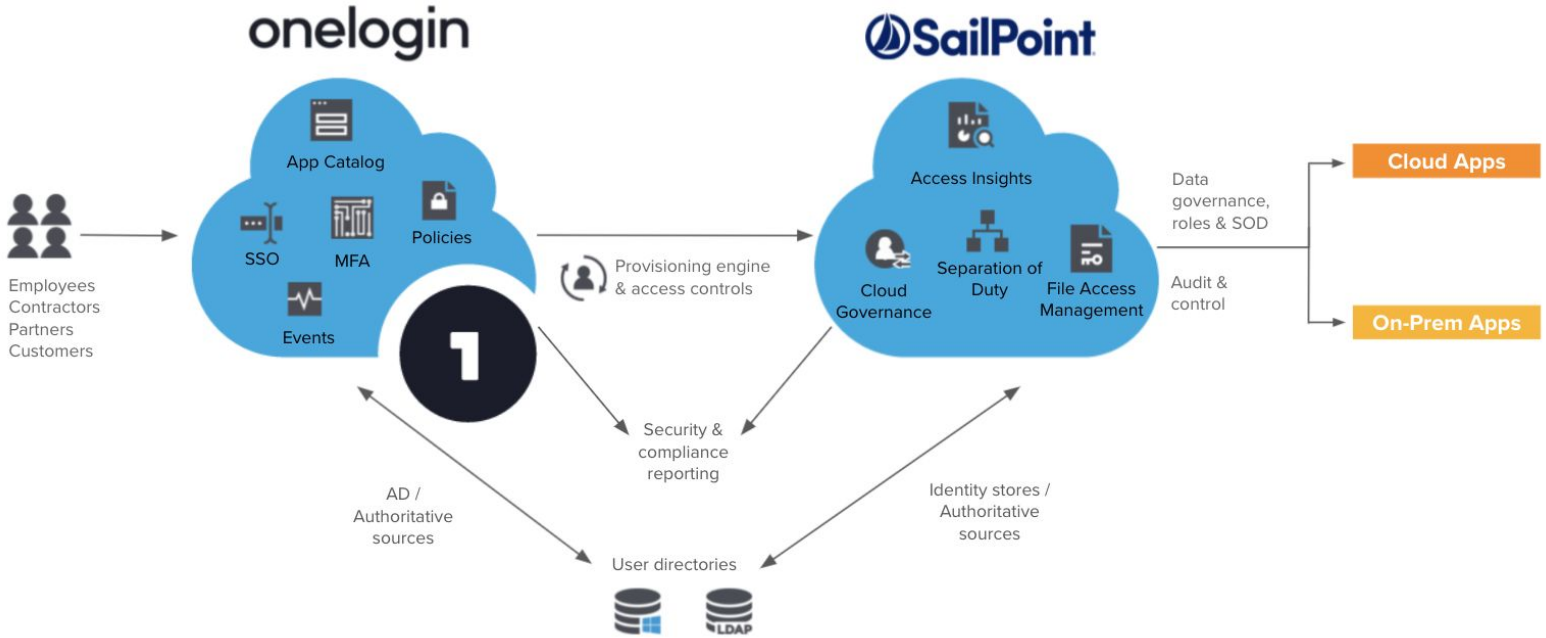

Conduct access reviews and ensure compliance adherence across all applications with user behavior data analytics and expanded threat intelligence.

Reduce IT Costs, Increase Operational Efficiency, and Boost User Productivity

Automate user lifecycle management, from onboarding and modifying access requests to password resets and automatic de-provisioning across all applications.

Seamlessly grant or revoke application access with automated authentication policy creation, enforcement, and management.

HOLISTIC CLOUD ACCESS GOVERNANCE & INTELLIGENCE FOR ENTERPRISES

ONELOGIN + SAILPOINT FUNCTIONALITY INCLUDES:

Features	Description
Access Governance and Intelligence for Cloud and Enterprise Apps	<ul style="list-style-type: none"> Schedule and manage custom access workflows and automatically provision / deprovision user access to cloud and on-prem apps.
High-Risk Login Detection to Trigger the Right Security Action	<ul style="list-style-type: none"> Leverage machine learning and risk insights to adjust authentication requirements in real-time and prevent an attack before it occurs.
IT Security, Risk & Threat Controls Mapped to Application	<ul style="list-style-type: none"> Implement out-of-the-box controls for mapping fine-grained entitlements to applications to increase security and IT efficiency.
Separation of Duties, Critical Access and Compliance Controls	<ul style="list-style-type: none"> Deploy separation of duty rules mapped to key applications out-of-the-box in order to reduce the risk of compliance failures.
Identity Analytics & Reporting	<ul style="list-style-type: none"> Access detailed audit reports and login activity via standard or custom reports. Stream events to SIEM solutions or external applications via API.
