

onelogin | SAVIYNT

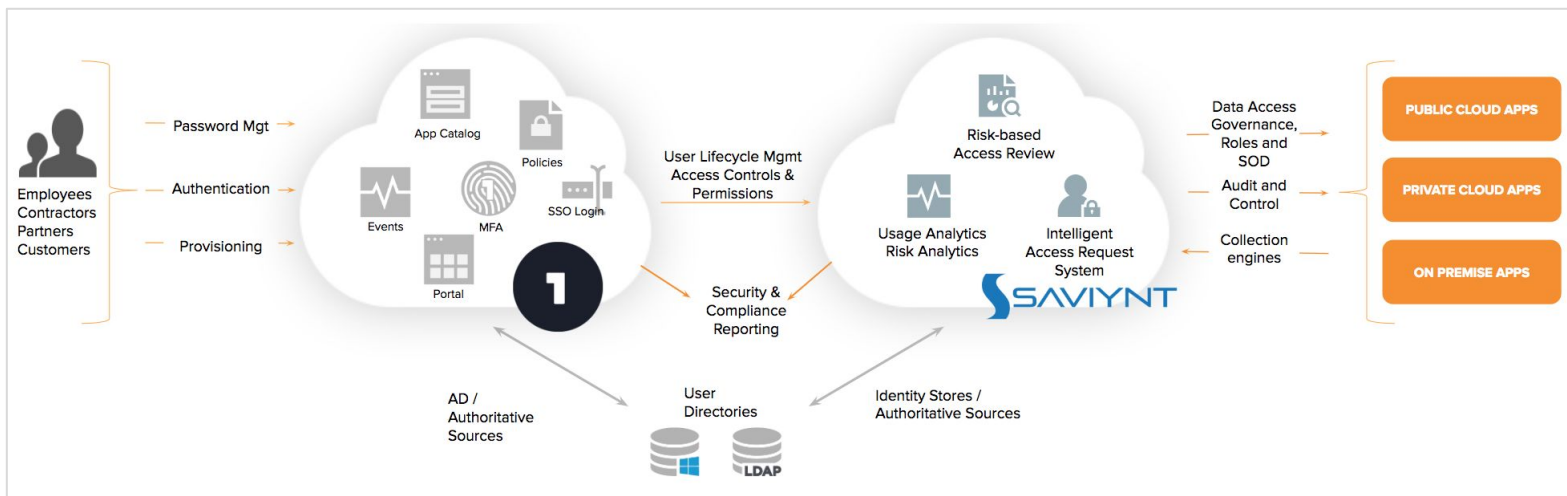

Integrated Identity Management and Governance for Enhanced Security and Compliance

OneLogin and Saviynt provide a powerful integrated solution to help enterprises **improve security and meet identity governance and compliance needs** across their hybrid cloud and on-prem IT environments.

OneLogin's Unified Access Management Platform covers both cloud and on-prem applications, offering single sign-on, adaptive multi-factor authentication, automated user management, directory integration, and access reporting.

Saviynt's Cloud Access Governance and Intelligence Platform extends audit and control capabilities for access life-cycle management and is pioneering IGA 2.0 by integrating advanced risk analytics and intelligence with fine-grained privilege management.

The combined offering extends **greater security and auditability** for any and all users, with any role, for any policy, entitlement or control, regardless of endpoint or device initiating the access request.

Joint Solution Benefits

Enhanced Security and Compliance across Cloud and On-Prem Apps

Centralize identity and governance policies and take advantage of advanced compliance controls, user behavior analytics, and access.

Gain more insights with advanced analytics and expanded threat intelligence from both platforms.

Conduct access reviews and ensure compliance adherence across all applications with Saviynt's IGA Platform.

Reduced IT Costs with Automated User Lifecycle and Access Management

Automate user life cycle management from on-joining and modifying access requests, password resets to deprovisioning user access to all applications.

Seamlessly grant or revoke application access with appropriate approvals and **automate authentication policy creation, enforcement, and management** through OneLogin's cloud-based identity management platform (SSO, MFA, IP based, and more).

Holistic Cloud Access Governance and Intelligence for Enterprises

Access Governance and Intelligence for Cloud and Enterprise Applications

Integrate with any on-prem or cloud application. Saviynt can import Access and Usage data from applications in real time or batch basis, analyze the data against industry leading controls, provide violations and remediate exceptions.

Out of Box IT Security, Risk and Threat Controls Mapped to Application

Saviynt provides over 150+ IT security, risk and threat controls mapped to specific applications access and usage. Controls are mapped to the fine grained entitlements so they do not change based on the application roles defined in an enterprise and can be used out of the box.

Out of Box Segregation of Duties, Critical Access and Compliance Controls

Saviynt provides over 120+ IT and business Segregation of Duty rules mapped to key applications out of the box. Rules are mapped to the fine grained entitlements so they do not change based on the application roles.

Automatic Authentication via Unified Access Management Platform

Schedule and manage custom access compliance workflows through Saviynt and, once granted, automatically provision / deprovision user access to cloud and on-prem applications via OneLogin.

High-Risk Login Detection to Trigger the Right Security Action

OneLogin Adaptive Authentication uses machine learning to determine whether to prompt users for MFA. It uses a broad set of inputs, including networks, devices, geography, and time, to build a user profile to score the risk of new login attempts.

Identity Analytics and Reporting

View Identity audit reports and intelligence via OneLogin's standard templates or build your own custom report in seconds. Export reports to Microsoft Excel, send OneLogin events to SIEM solutions, or use OneLogin's REST API to easily export events to external applications.
